Accessory

MOONROOF VISOR  
P/N 08R01-SVA-100

Application

2011 CIVIC  
2-DOOR Si

Publications No.

**All 44422**

Issue Date

**AUG 2010**

**Put this information in the glove box with the vehicle owner's manual.**

## PARTS LIST

Moonroof visor

2 Front brackets

2 Side brackets

4 Nuts

4 Protective tapes

4 Screws

## TOOLS AND SUPPLIES REQUIRED

10 mm Combination wrench

#2 Phillips screwdriver

Masking tape

Isopropyl alcohol

Shop towels

Felt-tip pen

Tape measure

Torque wrench

## INSTALLATION

1. Clean the roof area to be covered, and wax the area with a high-quality paste wax.
2. Open the moonroof.
3. Roll up two shop towels, and insert them between the roof panel and air deflector to lower the air deflector. Take care not to damage the air deflector.

- Using isopropyl alcohol on a shop towel, clean the fourth indentations on the inside edge of the moonroof opening where the protective tapes will attach.

- Remove the adhesive backing from one of the protective tapes. Starting at the bottom edge of the tape, wrap 4 mm (0.2 in.) of the protective tape around the lip of the moonroof opening to cover one of the indentations. Continue upward, adhering the tape to the top of the roof panel.

- Using the same procedure, attach the other protective tape to the roof at the other indentation.

- Locate the panel joint on the right side of the moonroof opening. Measure 98 mm (3.9 in.) toward the front of the car, and make a mark on the roof. Repeat on the other side of the moonroof opening.

- Using isopropyl alcohol on a shop towel, clean the roof at each of the two marks you've made, but don't wipe off the marks.
- Remove the adhesive backing from two protective tapes, and attach one to the roof at each of the two marks you made. Wrap 4 mm (0.2 in.) of the protective tape around the lip of the moonroof opening.

- Place the two side brackets into position over the protective tape and around the lip of the roof opening, and secure each one into position with a piece of masking tape.

- Place the two front brackets into position over the protective tapes and around the lip of the roof opening, and tape each one into position with a piece of masking tape. Make sure to align the lower end of the front brackets with the indentation in the lip.

- Set the moonroof visor on the vehicle roof in front of the moonroof opening, and adjust its position so the holes in the visor are aligned with the front bracket holes. Install two screws and nuts loosely into the front brackets.

- Insert screws through the holes and into the side brackets; then loosely install the nuts as shown.

- Position the moonroof visor with equal spacing on all sides. Check that the rubber seal is not twisted or rolled under the visor.

Correct

Incorrect

Not twisted or rolled under the visor

- Tighten the nuts and screws in the order shown, alternating between sides. To prevent damage to the moonroof visor and the resin nuts, do not overtighten the screws. Torque the screws to 2 N·m (1.5 lb-ft).
- Remove the shop towels and masking tape.

## CARE OF THE MOONROOF VISOR

- To avoid damaging the surface, never use ammonia-based cleaners or solvents to clean the moonroof visor.
- Clean with a solution of mild dishwashing soap and water using a soft cloth or chamois.
- To remove fine scratches and restore the original luster, use Meguiar's Mirror Glaze® plastic cleaner and polish or an equivalent high-quality plastic cleaner.
